**Product name:** Atrazine 80% WP

**Product Specification:**

Item	Specification
Atrazine content, %	80 ± 2.5
Suspensibility of atrazine, %	70 min
Water, %	2.5 max
pH value	6.0 – 10.0
Wetting time, s	120 max
Wet sieve test, % (pass through 75µm sieve)	98 min
Stability at elevated temperature	Qualified

**Introduction:**

This product is a selective systemic pre-emergence herbicide. It is absorbed principally through the roots, but also through the foliage. It is rapidly transmitted to plant meristems and leaves, interfering with photosynthesis and killing weeds. This product is easy to be washed by rain to a deeper level, resulting in an inhibitory effect on some deep-rooted weeds. It has good control on annual weeds in summer corn field.

**Direction for use:**

Crop	Target	Application Time	Dosage rate	Method
Summer corn field	Annual weeds	After sowing, before seedling	1500-2250 g/ha	Soil spray

**Note:**

1. Level the ground before applying.
2. Vegetables, soybeans, peach trees, wheat and rice are sensitive to this product; the liquid should not be sprayed or drifted onto such crops.
3. Soil with more than 6% organic matter content is not suitable for soil spray.
4. Do not mix with organophosphorus insecticides or use organophosphorus insecticides within 7 days before and after using this agent to avoid phytotoxicity.
5. Apply once at most for every crop cycle.
